

How to prepare a graphic file for LogoPoolFelt.com

Preferred File Formats:

EPS (*in CMYK or Pantone*)

TIF (*in CMYK or Pantone*)

Preferred Applications:

Adobe Illustrator™

Adobe Photoshop™

CorelDraw™

Preparing Your Print Files

When designing in Illustrator or Corel, always **outline your fonts** to avoid font conflicts and save or export the file as an .EPS (*encapsulated PostScript*).

Please save all Photoshop files as either CMYK .TIF or .EPS files.

Resolution should be minimum 100dpi - 150dpi at final output size.

Include a **bleed** of 1/2" inch.

All files should be CMYK or Pantone. If using a Pantone® color, specify the number and we will match as closely as possible. *Additional charges apply for color matching.*

Always include a color proof to ensure file (not color) accuracy.

FYI - *Although Microsoft products and similar desktop publishing products are not intended for large format printing, your graphic can be reworked for production.*

If you did not upload your file(s) during purchase on our website, you may email them to Sales@LogoPoolFelt.com, and please include your name, order number and order date.
